

## Key Benefits

- Migration provides unprecedented ease in migrating from one exchange environment to another
- Scalability to grow with your company
- Substantially simplifies Migration process
- Fully Active online replicated/standby server
- Better control of the migration process
- Easier to coordinate migration plans within the company
- No need to take down the production environment during the migration process

## Authorized Partner

## SonaExchange Backup

SonaExchange Backup makes it easy to establish an automated backup and recovery plan for your Microsoft Exchange environment with easy-to-use wizards and task scheduling. With SonaExchange Backup, you get full backup/restore capabilities that include Active Directory, ensuring total protection.

## SonaExchange Replication

SonaExchange Replication provides a surprising unique blend of extremely powerful Microsoft Exchange Replication capability with patent pending functionality. No longer do you need to hold your breath and hope that your replicated / standby server is actually going to work. SonaExchange Replication's Active Failover / Failback technology enables single mailbox failover and failback testing; which provides you with security in knowing that your replicated /standby server is going to be working in a matter of minutes when you need it. By having an Active Replicated / Standby server, it provides simplicity and unprecedented reliability in satisfying even the most demanding business continuity requirements by ensuring that there is no chance of propagating corruption to the replicated / standby server.

## Making Things Easy

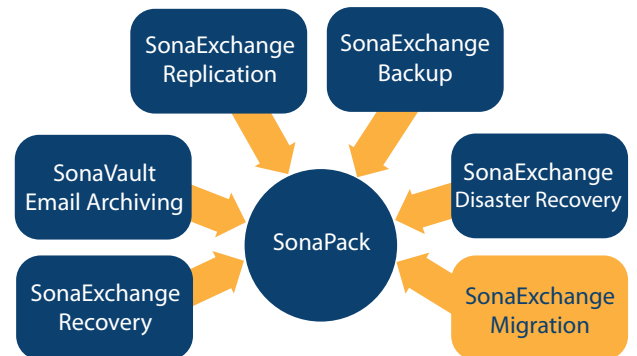

Sonasoftware is the only company offering a fully integrated suite of business continuity applications that provide unique capabilities that no other company can deliver.

The SonaPack consists of featured rich, stand-alone applications that can become a fully integrated solution for your Microsoft Exchange environment. The SonaPack suite provides Archiving, Replication, Backup, Migration, and Disaster Recovery. By combining the various components of the individual applications, you gain a tremendous advantage by leveraging the integrated architecture of the Sonasoftware solution to receive unique capabilities along with unmatched functionality and scalability. SonaPack can be implemented in phases as your company needs and requirements grow, or it can be deployed all at one time. SonaPack simplifies the installation and integration process by installing once, then unlocking features and functionality through license keys. This completely eliminates the issues of trying to implement solutions from three to four different sources, and more importantly stops the finger pointing when you are in desperate need of support.
