- Archive offline PSTs, existing emails, and public folders
- Multiple Case Management and litigation support
- Enhanced stubbing with no client plug-ins
- Role Based access and self-auditing
- Content identification policy and review management with email sampling

SonaVault email archiving solution is the next generation of email archiving solutions for the Small and Medium Businesses (SMB's) and the Remote Office Back Office (ROBO) market. SonaVault was designed to provide companies with the guarantee in knowing that they are capturing and storing all emails and that their emails are secure and accessible. SonaVault helps companies to satisfy their industry requirements for regulatory compliance.

SonaVault delivers a standalone, server agnostic, software based, full featured email archiving solution for Microsoft Exchange Server 2000, 2003, 2007 and 2010 that can be deployed in a server, virtual server, an appliance, or as a SaaS model in an MSP environment.

What is Continuous Archiving?

With SonaVault's industry changing patent pending feature, Continuous Archiving the difference maker, you will never miss another email even when your primary production environment is not accessible. So, when your exchange environment crashes, is down for repair, or is being upgraded, SonaVault provides you with confidence in knowing that your archive is working and still capturing all emails.

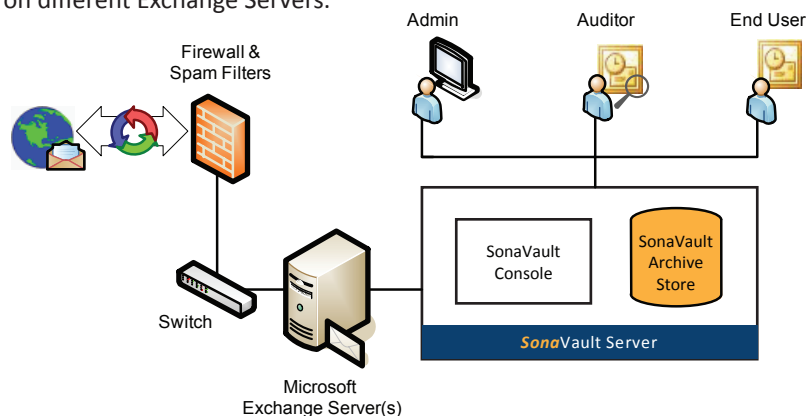

Secure Data Storage Management

SonaVault uses enhanced stubbing methodologies to reduce the size of the Microsoft Exchange Server. Stubbing can be configured and implemented to remove message contents, including attachments from all emails or specific groups within the company. The stub has an adjustable footprint to give optimal control of the exchange environment.

SonaVault's seamless integration with Microsoft Outlook provides users with transparent access to their emails in the archive store without the need of any additional plug-ins or client side integration. Users have the ability to reply, forward and retrieve contents directly from the SonaVault Store without causing additional burden on the exchange environment. When implementing stubbing, companies can reduce the size of their exchange server by as much as 90%.

Multi-Domain Archiving and Access

SonaVault enables one archive server to archive emails from users in multiple domains (child or completely different domains). Users from different domains and locations can be authenticated and login to the web console either through a Virtual Private Network (VPN) or the cloud. This is very useful in situations where companies have acquired or operate separate domains and emails are stored on different Exchange Servers.

Key Benefits

- Meet compliance requirements such as Sarbanes Oxley, HIPAA, GLB Act requirements and many more
- Substantially reduce the size of your exchange environment which reduces the backup / recovery time of the exchange server
- Find & retrieve email related information within seconds through sophisticated search technology
- Produce reliable information for legal discovery and investigations very quickly
- Manage email life cycle from composition to deletion through proper policies
- Formulate and enforce corporate email and security policies
- Excellent data protection through tamper-free mechanism and encryption

Authorized Partner

Litigation Support and Regulatory Compliance

SonaVault delivers an efficient, simple to use, tamper-free solution to retrieve and search through the email archive store for eDiscovery needs. With advanced search, extensive reporting, and exporting capabilities coupled with multiple-case management, and the ability to invoke litigation hold, SonaVault is ideal for pre-processing and litigation support.

SonaVault meets a wide variety of regulatory compliance, company, and industry defined retention policy requirements such as Sarbanes Oxley (SOX), Health Insurance Portability and Accountability Act (HIPAA), Gramm-Leach-Bliley Act (GLB Act), Security Exchange Commissions (SEC) Requirements and many more worldwide governmental regulations.

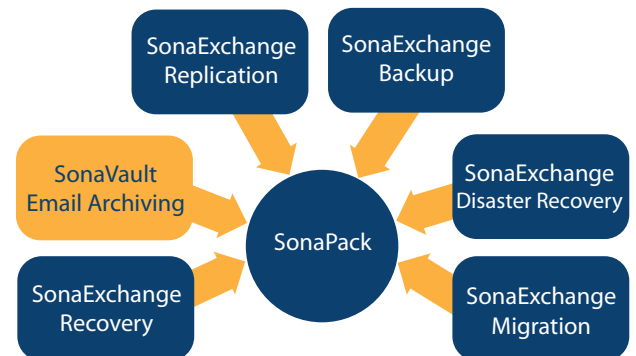

Migrating PSTs

SonaVault comes with a PST utility that enables organizations to eliminate PST files proliferation across the enterprise, improving email management and storage security, and better control their retention policies.

Making Things Easy

Sonasoftware is the only company offering a fully integrated suite of business continuity applications that provide unique capabilities that no other company can deliver.

The SonaPack consists of featured rich, stand-alone applications that can become a fully integrated solution for your Microsoft Exchange environment. The SonaPack suite provides Archiving, Replication, Backup, Migration, and Disaster Recovery. By combining the various components of the individual applications, you gain a tremendous advantage by leveraging the integrated architecture of the Sonasoftware solution to receive unique capabilities along with unmatched functionality and scalability. SonaPack can be implemented in phases as your company needs and requirements grow, or it can be deployed all at one time. SonaPack simplifies the installation and integration process by installing once, then unlocking features and functionality through license keys. This completely eliminates the issues of trying to implement solutions from three to four different sources, and more importantly stops the finger pointing when you are in desperate need of support.
